

SPEEDY INTERIOR PVC

PVC LOUVER STYLES:

SPEEDY INTERIOR PERFORATED

3.50" ± 1/16 louver width
 0.030" ± 0.003 louver thickness
 Bead .040" - .050"

PVC SPECIFICATIONS:

Vertical Blind Louvers shall be 3 1/2 inches wide. They shall be extruded with no lead added of 100% Goodrich Geon solid vinyl or equal. Louvers shall be extruded and manufactured by Speedy Interior, and guaranteed for five years. Color selection shall be made from standard Speedy Interior colors. Louvers are available in white, offwhite, ivory and grey. Other colors are available upon request.

Louvers shall withstand 140° heat chamber for thirty minutes without distortion, and with no more shrink or stretch than 1/2 of 1%. A 10 foot louver suspended from the center of one end shall hang perfectly straight with no twist, warp or bow. Edge shall be straight with no ripping, closing from top to bottom, and remaining neat and sharp in appearance. Louvers shall be permanently flame resistant if unaltered.

FLAME RETARDANCY: Rigid PVC demonstrates superior combustion resistance and makes it very useful in applications where a high degree of fire retardance is needed. It is self extinguishing and does not continue to burn once a flame source is removed.

PERFORATED FLAT: The most important advantage of a window is the view, yet the view is often eliminated by the need to block heat and glare. With perforated louvers however, the view can be enjoyed all the time. They control glare, block heat while preserving the exterior view. Perforated louvers are recommended where a continuous see-through effect is desired, and particularly as a supplement to windows of dark glass or mirror glass, where they give needed extra protection from exterior heat and stop interior mirror effects. Speedy Interior Perforated is recommended for most installations. It is 13% open and 87% opaque, with .045 holes, yet surprisingly allows full daytime view from the inside. In light colors, 75% of the heat radiation which hits the louvers is reflected out. Most of the rest is converted into heat at the window and carried away by the air-conditioning, thus stopping annoying direct heat.

Perforated louvers are made of solid flat louvers and are available in white, ivory and grey. Perforated louvers may be used on all of Speedy Interior headrails.

GUARANTEE: Speedy Interior guarantees all louvers against warp, twist, bow, brittleness, shrink, stretch, surface change and color change, but not against abuse or misuse. This guarantee shall cover all louvers for FIVE (5) years from the date of installation.
